

Deutschlandstipendium

We support the

January 2019 - Berlin: The “Deutschlandstipendium” scholarship provides financial and non-material support to high-achieving and committed students from all over the world. COREDAS GmbH participates in the great idea.

We firmly believe that today's technical and social challenges can only be solved through good education and advanced engineering methods.

Especially the need to develop more and more complex systems means bringing more young people from different disciplines to the engineering profession. Therefore, we donate a scholarship to a student from the Berlin School of Economics and Law (HWR) in the degree program "Business Engineering – Energy and Natural Resources".

Students from this course have a good basic engineering knowledge and at the same time a broad knowledge of renewable energy or electromobility. A master's student from this program completes an in-depth system engineering internship in our team in Berlin and learns to combine the learned scientific findings with our methods to develop modern technical systems in the automotive industry and energy storage technology.
