

TÜV BMS Conference in Shanghai

November 2018 - Shanghai China: Alexander Schüßler, founder of the COREDAS GmbH spoke at the BMS conference in Shanghai about "Managing the complexity of distributed battery management systems (a requirements and architecture driven approach)".

The conference was organized by TÜV China to share best practices and lesson learned from 10 years of BMS development in Europe with Chinese customers and interested engineers.

For some 100 interested listeners the requirements-engineering method was introduced which the COREDAS team has applied in different projects. The main points of the presentation were:

- Project Management: How to organize a distributed team via clear specification structure
- Divide and Conquer: How to create a functional Requirements-Architecture
- Requirements Quality: How to ensure consistent high-quality requirements

- Functional Safety: How to ensure to master the ISO-26262 safety audit

**If you are interested in the presentation, we are happy to organize an online presentation for you.
